Best Practices For Designing Commercial Hot Water Systems Using Heat Pumps

- Over the course of this one-hour CIBSE approved presentation, you will be led through the methodology behind correct design of air source heat pumps or ASHP based domestic hot water systems for commercial buildings.
- Learn how to minimise the size and maximise the efficiency of a heat pump based hot water system to reduce outlay costs, energy consumption and environmental concerns
- Understand how to reduce energy consumption to improve running costs and carbon emissions
- See how to create low carbon hot water systems customers will accept
