

Adveco's June 2022 Newsletter

Welcome to Adveco's June newsletter,

What is Net Zero? What are the benefits? What can I do today?

Introducing sustainability into buildings is a critical issue which is redefining the approach to commercial hot water and heating projects. With a predicted one-third rise in non-domestic floor space by 2050, much of the current focus resides on new builds, but this still leaves more than 1.6 million pre-existing non-domestic buildings in England and Wales, generating almost one-fifth of the UK's carbon emissions, needing expert, practical support.

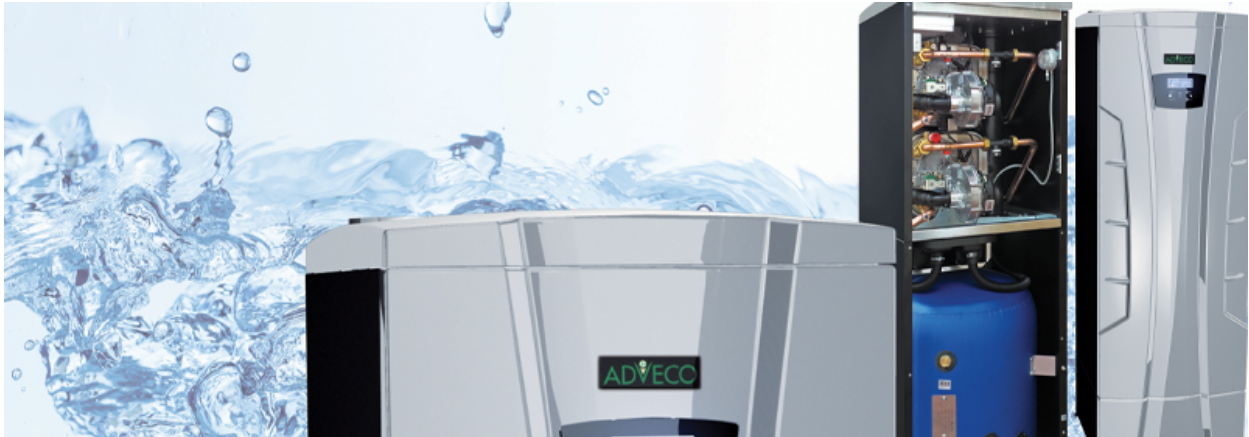

[VISIT THE ADVECO NET ZERO RESOURCE PAGE](#)

For more than fifty years, Adveco has been a leading innovator in the provision of hot water (DHW) for commercial scale projects across the UK. Today its focus is shifting to encompass a blend of traditional and new, more sustainable technologies in the form of solar thermal and especially heat pumps to integrate greater sustainability into DHW systems.

This month we are pleased launch our new Net Zero resource page, bringing together all the latest news and developments surrounding net zero in easy to consume bite-sized reports and video. It also acts as a great jumping off point to learn more about our ever expanding range of sustainable products and systems to address lower carbon provision of commercial hot water. Why not visit and bookmark the page today.

This month we have also expanded the AD family of condensing gas-fired commercial water heaters with the introduction of the [ADplus](#). Designed to provide a compact, high capacity and reliable method for delivering instantaneous hot water to a commercial building, ADplus is a tough all-rounder, even in corrosive soft water conditions. It is perfect for a wide range of applications - from small instant demands to large-scale continuous DHW needs. With minimal NO_x and CO emissions, the ADplus range is an eco-friendly way to serve your building's DHW system. The rugged construction, supported by Adveco's in-house warranty engineers, provides real peace of mind for your investment, whether replacing ageing gas appliances or adding redundancy to larger-scale heat pump projects.

Our Latest Products

ADplus Instantaneous Water Heaters

The the ADplus range of high-power gas-fired condensing water heaters featuring an integrated 120-litre stainless steel water storage tank for instantaneous continuous and on-demand domestic hot water (DHW). ADplus is available in three variants (70 kW, 115 kW and 140 kW rated heat output).

AD Condensing Water Heaters

Sleekly designed, modulating commercial floor-standing gas condensing water heaters for use with a buffer for high demand semi-instantaneous hot water applications from 70kW up to 280 kW.

GL Range

GL family of low-cost carbon steel storage tanks offer a selection of off-the-shelf vessels for commercial hot water (DHW) projects requiring direct electric heating, buffer storage, indirect heating or preheat.
