

May 2022

Welcome to Adveco's May newsletter,

We start with a new range of low cost carbon steel water tanks. The GL family offers a selection of off-the-shelf vessels, with no, single and dual coil variants for commercial hot water (DHW) projects requiring direct electric heating, buffer storage, indirect heating or preheat.

With the publication of the UK government's broad strategy on sustainability for the education sector, we draw out what this means for estate buildings. We are also extending our series of handbooks for schools and academies, as well as higher education which walk you through the issues and the water heating technologies currently available to help get projects on the path to net zero.

We are extremely pleased to announce we have once again been named as a finalist in the heat pump product of the year category in the 2022 National ACR & Heat Pump Awards. The [FUSION FPH-S range](#) of low carbon, all-electric, packaged hybrid hot water systems was conceived, designed and built by Adveco to specifically to address the complexities of meeting commercial hot water application demands with more sustainable heat pumps.

Why not check out our newly designed [blog page](#) for all the latest insights and news from Adveco, such as discovering why [rooftop solar](#) is suddenly back on the agenda.
