

E0070 Electric Immersion 3 kW

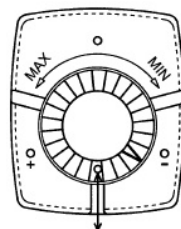

1.5" Immersion Heater for GLE Water Heaters

The Adveco EB0070 is an electric immersion element with a rated capacity of 3 kW, designed for use with the Adveco GLE glass lined electric water heater range.

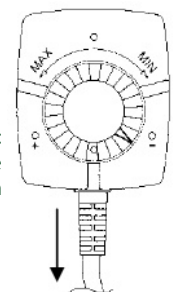

The E0070 features an integrated temperature controller via the dial on an IP44 rated terminal housing, as well as inbuilt non-self-resetting overheat control. The element is suitable for use in temperatures up to 85°C. A red LED indicator illuminates when the heating element is active.

To reset the element in the event of overheat cut-out, first remove power to and isolate the device. Turn the temperature dial towards "minimum" until it clicks, then turn until the two holes are aligned to unblock the reset switch (figure 1). Use a narrow tool or wire (Ø2mm) to reach inside the hole and press the reset switch until a sound is heard. Finally return the dial to the minimum setting, reconnect power, and then set the desired temperature.

Installation and maintenance of the element should only be performed by a qualified individual. This appliance must be earthed.
